<u>IN THE ABSTRACT:</u>

Page 46, delete lines 8-13, and insert --The system includes an

interactive multimedia mastering (IMM) system for receiving

multimedia program materials from a program source, a multimedia

call processing system (MCPS) coupled to the IMM, and a plurality

of interactive multimedia devices (IMDs) for distributing

multimedia information to users. The IMM optimizes the program

materials by separating the information into primary and

secondary layers using psychographic parameters to differentiate

between important and less important multimedia information, and

then compresses at least a portion of the layers for transmission

to the MCPS. The IMDs accept user commands for multimedia

information from a telephone, which cause the IMD to transmit a

control signal to the MCPS. The MCPS receives the control signal

while in a voice mode, and in response, branches to a program
